

A-liminate

Description

A-liminate is a specific diatomite formed from the *Melosira Granulata* species and processed to produce a product with a high affinity to bind a range of feed borne mycotoxins.

In addition to effectively minimising the risk of mycotoxins, it is an excellent anti-caking agent.

Usage

A-liminate is recommended for use in all livestock including, broilers, layers, grower and finisher pigs and beef and dairy cattle.

Administration

Add directly to mixer with the other ingredients and mix homogeneously.

Recommended inclusion rates

Low risk: 0.5 – 1.0 kg per ton of feed*
High risk: 1.0 – 2.5 kg per ton of feed*

**The rate of inclusion would be dependent upon either the actual level of mycotoxins present in the feed and or the factors associated with the potential risk of mycotoxins being present in the feed and the animals consuming the feed. To assess the risk, it may be necessary to contact Stockpower Pty Ltd or your local veterinarian or animal nutritionist.*

Compatibility

This is a feed supplement that is suitable for all types of animal feed and is compatible with all types of feed ingredients. A-liminate will not bind any vitamins, minerals or medications.

Safety Precautions

Do not use in undiluted form.

No withdrawal period is necessary.

Store in a cool, dry place, out of direct sunlight.

Close bag securely after use. Keep out of reach of children.

Care must be taken at all times to reduce dust generation.
